Summary

Mobile Application Developer with 5+ years of experience in designing and developing cross-platform apps using Flutter and Kotlin. Skilled in leading end-to-end development of scalable, high-performance mobile solutions with clean architecture and real-time features. Recently launched a production event platform (eventiran.com) on Web and Android, and published the [outline_mobileproxy](#) plugin on pub.dev. Adept at collaborating with cross-functional teams, integrating complex systems, and continuously learning to solve challenging technical problems.

Core Competencies

Cross-Platform Mobile Development (Flutter)	Clean Architecture & Scalable Code Design	Debugging and Issue Resolution
Android & iOS & PWA Deployment	Flutter Plugin & Native Integration	Cross-functional Team Collaboration
Ownership Mentality & Proactive Problem Solving	Performance Optimization & Memory Management	UI/UX Implementation (Material Design, Custom Widgets)

Experience

Event Iran

Tehran, Iran

Flutter Developer — Personal Project

2026 – Present

- Designed, built, and launched eventiran.com — a platform for discovering and registering for online and in-person events across Iran — live on Web with a released Android APK, from a single Flutter codebase.
- Architected with Clean Architecture, BLoC, and `go_router`; Supabase backend for authentication, data, and storage; map-based event discovery, Persian calendar support, and a fully RTL Persian UI.
- Published [outline_mobileproxy](#), a Flutter plugin on pub.dev wrapping the Outline SDK's Mobileproxy library (local HTTP proxy on Android/iOS with no VPN permissions), shipping prebuilt Go Mobile native binaries verified by a GitHub Actions CI pipeline with on-device integration tests.

Pars Royal

Tehran, Iran

Mobile Application Developer

09/2019 – 09/2023

- Led the development of 10+ Flutter-based applications across Android, iOS, and Web.
- Designed a real-time tracking system for field staff (sales, merchandisers, etc.) with offline support and POS compatibility.
- Implemented an Intelligent Routing System to optimize delivery routes, improving distributor efficiency.
- Developed a warehouse management app including receipt/remittance entry, stock taking, and OCR-based product detection.
- Created an app for truck inspection with support for image capture, questionnaires, and digital signatures.
- Built a cosmetic e-commerce app with order tracking and history, deployed across multiple platforms.
- Delivered a mining industry app for tracking daily machine/workforce activity and reporting using Flutter.
- Developed a multi-language reporting platform using Flutter with Clean Architecture and Bloc for state management, deployed on both Android and Web. The app featured dynamic PDF/Excel exports and interactive charts, and later evolved into a widely used enterprise solution with live map tracking and task management.

Freelancer

Tehran, Iran

Flutter Developer

2024

- Developed a dual-sided service marketplace platform with Flutter, including separate customer and specialist applications. Customers could request a wide range of services (technical, maintenance, and on-demand services), while specialists reviewed requests, submitted price offers, and completed jobs after in-app agreement and payment.
- Contributed to D2Type, a diabetes prevention and management app published on the [App Store](#) and [Google Play](#). Users complete a questionnaire about their health history, family background, and lifestyle, and receive personalized steps for diabetes prevention or management.

Freelancer

Flutter Developer

- Developed a cross-platform health and nutrition app using Flutter with Clean Architecture and Bloc for state management. The app supported Android and PWA deployment, and featured local data storage to log daily calorie intake, track height and weight, and calculate BMI. It also included food tracking, personalized dietary advice, and real-time chat with nutritionists to promote healthy lifestyle habits.

Tehran, Iran06/2023

Freelancer

Android Developer

- Developed an Android app for municipal water and sewage inspection officers.
- Integrated Clean Architecture (MVVM), Dagger, Room, RxJava, and OpenStreetMap.
