Summary

Mobile Application Developer with 6+ years of experience designing and building cross-platform apps with Flutter and Kotlin. I lead end-to-end development of scalable, high-performance products with clean architecture and real-time features, and I ship independently: a full-stack fitness app with its own FastAPI backend, a live event platform on web and Android, a published game, and three open-source packages on pub.dev — including one that puts a single type-safe API across seven Iranian payment gateways, and two Flutter plugins that ship verified Go Mobile native binaries for Android and iOS.

Core Competencies

Cross-Platform Mobile Development (Flutter)	Clean Architecture & Scalable Code Design	Backend & API Development (FastAPI, PostgreSQL)
Android, iOS, Web & PWA Deployment	Flutter Plugin & Native Integration (Kotlin / Swift / Go)	Cross-functional Team Collaboration
Payments, In-App Purchases & Ad Monetization	Performance Optimization & Memory Management	UI/UX Implementation (Material Design, Custom Widgets, RTL)
Game Development (Flutter + Flame, testable physics)	API & Package Design (pub.dev publishing)	Ownership Mentality & Proactive Problem Solving

Experience

Independent Products & Open Source

Tehran, Iran

Flutter Developer

2026 – Present

- Built and launched Owj end-to-end — a Persian-first (RTL, Jalali), offline-first gym and body-weight tracker for Android, iOS and the web as an installable PWA. Flutter with GetX and Drift (SQLite): fast set logging, automatic weight progression, weekly plans, 1RM and records, a muscle-balance map, a 5,600+ exercise library, backups, and imports from Strong, Hevy, FitNotes and Apple Health. A Dart rewrite of the open-source openGym, kept faithful to it by parity tests.
- Designed, built and deployed Owj's backend on my own — Python, FastAPI, PostgreSQL, Redis, S3-compatible storage and Docker Compose — for optional accounts and coach–student linking: SMS one-time-code sign-in, short-lived JWTs with rotating refresh tokens and reuse detection, and an OpenAPI contract that both the app and the server test against, so the two cannot drift apart.
- Designed, built, and launched eventiran.com — a platform for discovering and registering for online and in-person events across Iran — live on Web and published on Cafe Bazaar, from a single Flutter codebase. Clean Architecture, BLoC and go_router, with a Supabase backend for auth, data, and storage; map-based discovery, Persian calendar support, and a fully RTL UI.
- Built and published Parto, a one-touch rhythm game (Flutter + Flame) on Cafe Bazaar: 15 hand-authored levels across four movement modes, fully procedural neon visuals, beat-synchronized gameplay, ad mediation and in-app purchases. Physics and collision live in pure Dart with no engine imports, so level solvability is a unit test rather than a manual playthrough (~170 tests).
- Published pardakht on pub.dev — one type-safe Dart API across seven Iranian payment gateways, with an explicit money type, a sealed error taxonomy, server-side verification with a proxy mode for mobile clients, and deliberately asymmetric retries so state-changing calls are never retried automatically. ~680 tests.
- Published the Flutter plugins outline_mobileproxy and psiphon_mobileproxy — on-device local HTTP proxies (Shadowsocks / SOCKS5 / Smart Dialer, and Psiphon) that need no VPN permission, shipping prebuilt Go Mobile binaries for Android and iOS that CI rebuilds and verifies on every change.

Pars Royal

Tehran, Iran

Mobile Application Developer

09/2019 – 09/2023

- Led the development of 10+ Flutter-based applications across Android, iOS, and Web.
- Designed a real-time tracking system for field staff (sales, merchandisers) with offline support and POS compatibility.

- Implemented an Intelligent Routing System to optimize delivery routes, improving distributor efficiency.
- Developed a warehouse management app including receipt/remittance entry, stock taking, and OCR-based product detection.
- Created an app for truck inspection with image capture, questionnaires, and digital signatures.
- Built a cosmetic e-commerce app with order tracking and history, deployed across multiple platforms.
- Delivered a mining industry app for tracking daily machine and workforce activity and reporting.
- Developed a multi-language reporting platform in Flutter (Clean Architecture, BLoC) for Android and Web, with dynamic PDF/Excel exports and interactive charts — later evolved into a widely used enterprise solution with live map tracking and task management.

Freelancer — Tehran, Iran

Flutter Developer — 2024

- Developed a dual-sided service marketplace platform with separate customer and specialist applications: customers requested technical, maintenance, and on-demand services, while specialists reviewed requests, submitted price offers, and completed jobs after in-app agreement and payment.
- Contributed to D2Type, a diabetes prevention and management app published on the App Store and Google Play. Users complete a health, family history, and lifestyle questionnaire and receive personalized steps for prevention or management.

Freelancer — Tehran, Iran

Flutter Developer — 06/2023

- Developed a cross-platform health and nutrition app (Flutter, Clean Architecture, BLoC) for Android and PWA, with local storage for daily calorie logging, height/weight and BMI tracking, food tracking, personalized dietary advice, and real-time chat with nutritionists.

Freelancer — Tehran, Iran

Android Developer — 12/2019

- Developed an Android app for municipal water and sewage inspection officers.
- Integrated Clean Architecture (MVVM), Dagger, Room, RxJava, and OpenStreetMap.

Education

University of Kashan — Kashan, Iran

B.S. in Computer Science — 2015 – 2019

Technical Skills

Languages & Frameworks
Dart, Flutter, Flame, Kotlin, Java, Swift, Go, Python (FastAPI)

Architecture & Patterns
Clean Architecture, MVVM, BLoC, Cubit, Provider, Riverpod, MVC

State Management
BLoC, Cubit, Provider, Riverpod, GetX

UI/UX
Material Design, Custom Widgets, Responsive Design, Custom Painting, Figma Integration

Tools & Platforms
Git, GitHub/GitLab, GitHub Actions, Android Studio, VS Code, Postman, Firebase Console, Docker

Testing & Debugging
Unit Testing, Integration Testing, Golden/Headless Simulation Tests, DevTools, Logging

Deployment
Android (APK, AAB), PWA, iOS TestFlight, Web Builds, Play Store, App Store, Cafe Bazaar, pub.dev

APIs & Integration
RESTful APIs, WebSockets, PostgreSQL, Redis, Drift/SQLite, Firebase, Supabase, Payment Gateways, In-App Purchases, Ad Mediation, Google Maps API, Push Notifications

Other
Flutter Plugin Development, Platform Channels, Go Mobile Bindings, CI/CD & Binary Provenance, Agile/Scrum, Localization & RTL, Performance Optimization

Languages

Persian: Native
English: Professional working proficiency
